USER MANUAL FOR FAMS

Introduction: The Face Recognition Attendance Management System (FAMS) is an automated system that uses facial recognition technology to capture and record attendance. This system eliminates the need for traditional methods of attendance such as manual registers, roll-calls, etc. FAMS is an efficient and time-saving solution for educational institutions, corporate offices, and other organizations.

Features:

- Automatic attendance capturing through facial recognition technology
- Real-time attendance tracking
- Quick and easy installation
- User-friendly interface
- Cloud-based data storage and management
- Reports generation and analysis
- Integration with other systems

System Requirements:

- High-resolution camera with facial recognition technology
- Reliable internet connectivity
- Computer or server for data storage and management
- FAMS software
