MAINTENANCE

- **Deployment and maintenance:** The report should detail how the system was deployed in the target environment, including any challenges or issues encountered during deployment. It should also include a plan for ongoing maintenance and updates to ensure the system continues to function properly.

- **User interface design:** The report should detail the design of the user interface for the system, including how employees will interact with the system to record their attendance.

- **Security and privacy considerations:** The report should detail how the system ensures the security and privacy of employee data, including measures taken to prevent unauthorized access and protect against data breaches.
