STEPS OF TESTING OF MODULES

4. Database management module:

- Test the module to ensure that it can store and retrieve data correctly.

- Verify if the module can handle large amounts of data efficiently.

- Test the module with different types of databases, such as MySQL and MongoDB.

5. UI design module:

- Test the module to ensure that the user interface is intuitive and easy to use.

- Verify if the module can handle different screen sizes and resolutions.

- Test the module with different operating systems, such as Windows and
